

WHAT IS APRC?

The Aromatic Plant Research Center is an independent ISO 17025 certified; 3rd party testing and research facility that specializes in aromatic plants, extracts, and essential oil testing.

WHAT DOES APRC DO?

APRC has five major focuses:

1. Quality and purity testing for essential oils and aromatic plant extracts.
2. Research and sustainability evaluation of aromatic plants.
3. Publications and review of peer-reviewed papers.
4. Education on aromatic plants, essential oils, and extracts.
5. Satellite Lab operation and management

WHAT MAKES APRC UNIQUE?

Utilizing the most advanced equipment and highly educated experts, APRC is the world leader in adulteration detection and quality testing in essential oils. We perform the ground sustainability research utilizing our expert team for the long-term viability of aromatic plants. The APRC board has more than 100 years of combined experience in aromatic plants and has published more than 1000 peer-reviewed papers during that time.

Testing

Our lab specializes in the identification and quantification of pesticides, microorganisms, allergens, and synthetic chemicals.

Testing We Offer:

- GC-MS/FID
- Physical Constants • Chiral GCMS
- C14 Testing
- GC-MS MS, LC-MS MS

AROMATIC PLANT RESEARCH CENTER

230 N 1200 E Suite 102, Lehi, UT 84043

aromaticplant.org

WE PROVIDE UNCOMPROMISING RESEARCH, ANALYSIS, AND TESTING SERVICES TO THE MEDICAL, UNIVERSITY, AND BROADER ESSENTIAL OIL COMMUNITY AROUND THE WORLD.

Aromatic Plant Research Center

Experts estimate that 80% of commercially available "pure" essential oils are adulterated in some way. Our mission is to provide individuals with a reliable source for verifying essential oil purity.

Our expert staff has decades of combined experience in verifying essential oil purity. They have studied and developed a variety of methods to detect adulterations through use of new techniques and state-of-the-art equipment.

While other laboratories evaluate a wide range of products containing plant based ingredients, we specialize in essential oil research and testing. We work to compile existing publications, interview experienced essential oil producers, conduct field research, gather raw materials, discover new therapeutic benefits of essential oils, and more.

In addition to examination of the latest application techniques, market research is done to keep the public updated on the quality of essential oils currently available. Our intensive, research-based methodologies enable us to provide the public with unparalleled support in their search for the highest quality essential oils.

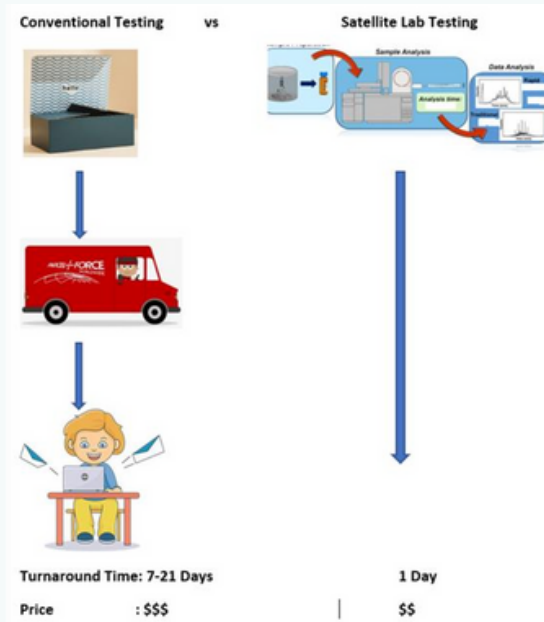

EDUCATION

- APCR offers education on essential oils and testing
- Creation of the largest database of essential oils.

SATELLITE LAB

- Satellite laboratories are usually small branch laboratories that are affiliated with but not physically located at the central lab (APRC).
- Turnaround time and expenses are way lower than traditional testing. Quality of testing is world class.
- Hiring, retaining expert chemists and potential breach of confidential information have zero possibilities.

SERVICES PROVIDED FOR A SATELLITE LAB

- Basic technical support (remote)
- 24hrs Turnaround Time
- Third party approved report Lab
- Operation (Method validation, development, SOP, and marketing)
